

Aussie Concrete Products is an Australian company creating masonry wall solutions for Australian conditions.

We are **committed** to designing and producing **quality products** specifically suited to our customers needs.

With over 40 years combined experience between us in the landscaping industry, we are able to offer **professional advice** and quality products for your retaining wall.

Grey concrete sleepers

Grey concrete sleepers have a plain, smooth finish making them ideal for a neat-looking retaining wall. They can be coloured by mixing oxide through the concrete during the manufacturing process for either a charcoal or sandstone look.

Reinforced with steel, they provide structural strength for a durable retaining wall. Engineer designed and made to Australian Building Standards, our grey concrete sleepers are an affordable way to build your retaining wall.

- Concrete posts available to match sleepers
- A cost effective way to build your retaining wall

Priced from:

- Approx \$120 + GST per m2 supply only
- Approx \$245 + GST per m2 supply and install

Sandstone look sleepers

Sandstone look sleepers are textured and coloured to mimic the appearance of sandstone.

The colour is produced by an oxide which is mixed through the concrete during the manufacturing process. The colour will not fade, chip or peel away.

The sleepers are reinforced with steel and manufactured to Australian Building Standards, and are fire and termite resistant.

- Sandstone look posts available to match sleepers
- A great way to add character to your home

Priced from:

- Approx \$140 + GST per m2 supply only
- Approx \$275 + GST per m2 supply and install

Timber look sleepers

Timber look sleepers combine the timeless look of timber with the numerous benefits of concrete. These charcoal coloured sleepers will maintain the beauty and natural look of your outdoor space, whilst avoiding the common deterioration problems that come along with timber.

Engineer designed and made to Australian Standards, our sleepers do not require any bolting or fastening, and are a long-lasting and durable alternative to timber sleepers.

- Timber look sleepers are available in 1.6m lengths
- Designed for use with our galvanized steel posts

Priced from:

- Approx \$140 + GST per m2 supply only
- Approx \$275 + GST per m2 supply and install

Galvanised steel H beams

The 100UC steel beams are hot dip galvanized to prevent rust, and can be used to create a stylish and modern looking retaining wall.

Lighter and easier to handle than a concrete post, they make a great DIY project for the home handyman and are a time efficient product for commercial applications.

Their slimline design makes them perfect for use on boundary lines. The sleepers simply slip into the post channel leaving a neat finish.

- Life span of 40 – 60 years
- Size range from 800mm to 3000mm

Priced from:

- Approx \$265 + GST per m2 supply and install (grey concrete sleepers)
- Approx \$295 + GST per m2 supply and install (sandstone look concrete sleepers)

DO'S AND DON'TS WITH OUR SLEEPERS AND RETAINING WALLS

DO

- Ensure that, if you are transporting the sleepers or posts yourself, that they are suitably supported so they do not get damaged during transit. Transporting on a flat surface, like a box trailer or tray, is best with even sized timbers in between the layers of sleepers
- Structure must remain at a minimum of 2.0m from sewer & storm water lines or a Building Over/Adjacent to a Sewer/Storm Water assessment will be required from your local council
- Consult your local council regarding building setbacks for front, side and rear boundaries
- Talk to your neighbours if building your wall on property boundary to avoid any future problems
- Check the engineer specifications for wall dimensions
- Seal the edges after cutting sleepers and posts
- Ensure water run off from above wall is directed away from back of wall
- Ask us for advice if you need it

DON'T

- Drop the sleepers or posts
- Impact them sharply
- Lift more than you can handle
- Place sleepers behind posts for at least 3 days, allow time for concrete to cure
- Push backfill into back of the wall with any machinery. Always place backfill in from the top, using a Bobcat/Dingo or by hand
- Run machinery within 1m of the wall

Note: According to Queensland building regulations, you do not need building approval for a retaining wall if it fulfils the following three criteria:

1. There is no 'surcharge loading' over the 'zone of influence' for the wall
2. The total height of the wall and of the fill or cut retained by the wall is no more than one metre above the wall's natural ground surface
3. The wall is no closer than 1.5 metres to a building or another retaining wall

Quality products that cost you less.

An Aussie Concrete Products retaining wall is designed to last the test of time. Our professional staff will advise you on the most cost effective retaining wall to suit your specifications.

We handle all types of projects and no job is too big or too small. We can supply and deliver or we can arrange to install your commercial or residential retaining wall.

Aussie Concrete Products has many satisfied customers spread throughout Brisbane and South East Queensland. Our products are the first choice of many professional builders, landscapers, engineers and the do-it-yourself home handyman.

What can you expect from an ACP retaining wall?

- is engineer designed
- is reinforced with steel and built to Australian standards
- will provide structural strength and stability for life time durability
- conforms to building codes
- is a quality product at a cost effective price
- is termite resistant
- is free of chemicals
- is fire proof
- can be coloured or painted to match your home

We have a large team of wall builders that are trained to install your wall professionally and on time. All walls over 1m high are engineer approved and certified to give you peace of mind, and we are also able to take care of Council approvals if needed. We also offer an obligation free measure and quote service.
